

New Keystone®. Superior control beats old chemistry.

Keystone® herbicide is a powerful combination of acetochlor and next generation atrazine that keeps your corn consistently clean. It provides great grass control, including foxtail, barnyardgrass and crabgrass. Keystone also controls key broadleaf weeds, providing complete control of waterhemp, lambsquarters and redroot pigweed in 2002 Dow AgroSciences field trials.

Universities agree it's better.

Weed control ratings published by 11 leading Midwestern universities in 2000 and 2001 show that acetochlor products like Keystone always performed as well as – and usually better than – products containing metolachlor, such as Dual II Magnum and Bicep II Magnum herbicides. Acetochlor products bested the competition in the following studies:

- Better control of lambsquarters in 10 of 11 studies (equal in 1)
- Better control of pigweed in 6 of 11 studies (equal in 5)
- Better control of common ragweed in 7 of 9 studies (equal in 2)
- Better control of velvetleaf in 4 of 9 studies (equal in 5)

Test results give Keystone the edge.

In 2002 Dow AgroSciences field trials, Keystone also performed equal to or better than products containing metolachlor.

Keystone beats the competition.

	Keystone	Bicep II Magnum
Velvetleaf	98.8%	96.2%
Common Sunflower	95.8%	87.5%
Giant Foxtail	97.1%	96%
Green Foxtail	90%	81.2%

2002 Dow AgroSciences field trials

Unique formulation.

Keystone contains a next generation atrazine not found in any other preemergence herbicide. Plus, it's formulated with an advanced surfactant/additive package. As a result, Keystone:

- Handles easily
- Is less viscous than other products, such as Degree Xtra herbicide
- Delivers an even spray distribution of active ingredients, from the top to the bottom of the tank
- Provides consistently high levels of weed control

Keystone® and Hornet® WDG are perfect partners.

A one-pass tank mix of Keystone® and Hornet® WDG herbicides provides unbeatable soil-applied control of the broadest spectrum of weeds. Hornet WDG gives excellent control of large-seeded broadleaf weeds, including ragweed, velvetleaf, cocklebur and sunflower. This complements the small-seeded broadleaf weed and grass control in which Keystone excels.

Keystone + Hornet WDG beat the competition.

	Keystone + Hornet	Dual II Magnum + Callisto + Atrazine
Giant Ragweed	100%	75.5%
Common Ragweed	100%	98.2%
Common Cocklebur	91.8%	81.9%
